TREE-CENTRIC

AN ANALYSIS CAMPAIGN USING DISTINCT DATA COLLECTION TECHNIQUES

Using industry grade measures to collect information, we scan and analyze hundreds of millions of trees, providing you with the most comprehensive and dependable metrics per tree.

AERIAL COLLECTION TOOLS

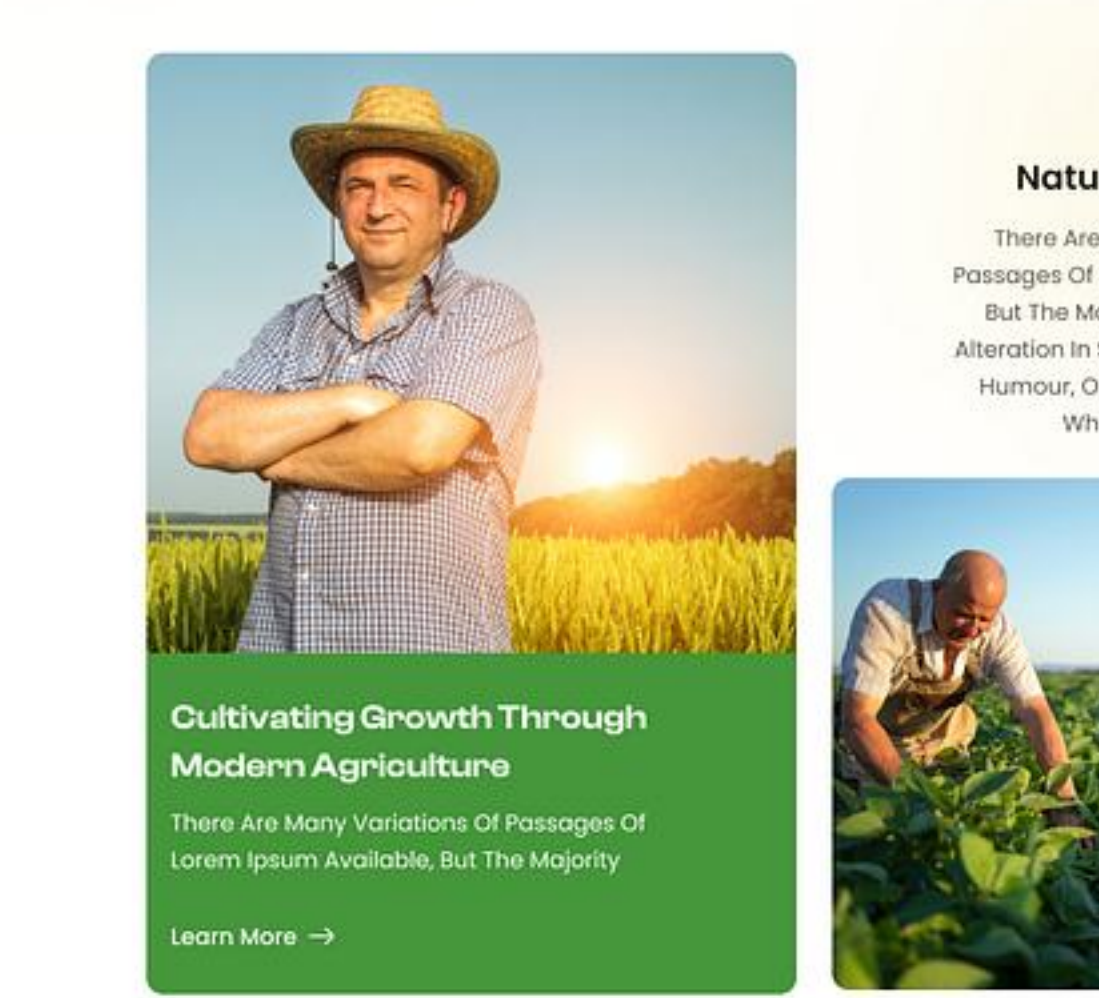

Drones, light aircraft & satellites provide an aerial view of your entire farm, and for each tree.

GROUND COLLECTION TOOLS

Manned and unmanned vehicles, IoT sensors and per-block weather data verify the aerial data.

BOOTS ON THE GROUND

Agronomists and scout teams are sent to triple check the data collected, and verify the actions required.

ACCESS YOUR DIGITAL FARM

The entire process is packaged in one user-friendly intelligence platform, accessible at any time, anywhere. On your laptop, or mobile device, we've got you covered. All year round. We accompany you from the air, the ground and physically from your farm - truly making the most of artificial intelligence and human intelligence.

The entire process is packaged in one user-friendly intelligence platform, accessible at any time, anywhere. On your laptop, or mobile device, we've got you covered. All year round.

Frequently Answer And Question

How do i prepare my soil for planting?

+

What are the key factors for successful crop rotation?

+

What is organic farming, and how does it differ from conventional farming?

—

Conventional farming uses chemical fertilizers to promote plant growth, while organic farming employs manure and compost to fertilize the soil. Conventional farming sprays pesticides to get rid of pests, while organic farmers turn to insects and birds, mating disruption, or traps.

How can i control weeds effectively without harming my crops?

+

What are the benefits of using cover crops?

+

How do i manage irrigation efficiently to conserve water?
